                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Length 1968;
Sequence 1, Application US/08890383
Sequence 1, Application US/08890383
Patent No. 6008026
GENERAL INFORMATION:
APPLICANT: Atthony G. Day
TITLE OF INVENTION: MUTANT ALPHA-AMYLASE HAVING INTRODUCED
TITLE OF INVENTION: THEREIN A DISULFIDE BOND
NUMBER OF SEQUENCES: 11
CORRESPONDENCE ADDRESS:
ADDRESSEE: Genencor International, Inc.
STREET: 925 Page Mill Road
CITY: Palo Alto
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Score 76.8; DB 3;

Mathur EJ; Callen W, Richardson T, Frey G, Miller C, Kazaoka M, Short $JM_{\rm i}$ WPI; 2003-018657/01. Novel alpha amylase polypeptide, useful e.g. for starch liquefaction, textile desizing, treating lignocellulosic fibers and for preparing dough or baked product, has increased activity and stability. Claim 30; Fig 7; 147pp; English.

The invention relates to a purified alpha amylase polypeptide and the polymucleotide encoding it. The polypeptide is useful for liquefying a starch containing composition, hydrolysing a starch linkage, catalysing the breakdown of a starch and producing high-maltose or high-glucose syrup or mixed syrup, where the starch is from rice, germinated rice,

```
corn, barley, wheat, legumes or sweet potato. The polypeptide is also useful for washing an object, textile desizing, treating lignocallulosic fibre pumproving fibre properties, enzymatic de-inking of recycled paper pulp and modifying small molecules by biocatalytic reaction. The polypeptide is further useful for increasing the flow of production. The polypeptide is further useful for increasing the flow of production. The pulps from a subterranean formation by removing a viscous, starch. Containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore, by pumping an enzyme treatment comprising the polypeptide and an aquecus fluid to a desired location within the well-bore which is effective. To alpha amylases have increased activity and starch-containing fluid. The alpha elucosidic linkages in the starch-containing fluid. The alpha elucosidic linkages in the starch-containing fluid and temperature and can be used in preparing dough to provide an improved anti-staling effect as measured by less crumb firming, retained crumb elasticity, improved slice-ability, improved palatability or improved invention. This sequence represents an alpha amylase of the invention
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   YAFILIYEGQPIIFYRDYEEWLAKDKLKALIWIHENLAGGSTDIVYYDNDELIFVRAGYG 360

The present sequence represents an alpha-amylase enzyme, which may be purified using the method of the invention. The specification describes a method for purifying an enzyme, such as alpha-amylase and cellulates, by flocculating fermentation broth containing bacterial cells containing the enzyme, centrifuging and extracting enzymes by filtration. Alternatively, the above method involves subjecting a fermentation broth to a heatthe heat-killed broth with a buffered medium, releasing the enzyme contained in the cells of the fermentation broth and extracting the contained in the cells of the fermentation broth and extracting the derived from a mixed population. The method is useful for purifying an enzyme population. The alpha-amylases are useful in corn-wet milling processes, detergents, baking processes, beverages and in oil fields (fuel ethanol)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ö

The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-liking of recycled paper upp, or producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, between the dough and in corn-wet milling processes, between the paper and pulp industry, for removing a farch modification in the paper and pulp industry, for removing carach modification in the paper and pulp industry, for removing bakery products. The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             Alpha amylase; enzyme; starch linkage hydrolysis; starch liquefaction, starch breakdown catalysis; textile desizing; lignocellulosic fibre; enzymatic de-inking; recycled paper; high-maltose syrup; dough; high glucose syrup; corn-wet milling process; detergent; baking process; beverage, oil field; fuel ethanol; brewing process; staling; starch modification.

pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergants, baking processes, beverages, oil fields (fuel ethanol), brewing processes starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of bakery products. Sequences ABU03144 represent alpha amylase
                                                                                                                                                                                                                                                                                                         ô

The invention relates to a purified polypeptide with alpha-amylase activity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for caralysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing car before an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper comply, for producing a high-maltose or high-glucose syrup or a mixed cayrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The cubterranean formation which surrounds a completed well bore. The cubterranean formation which surrounds a completed well bore. The cubterranean formation in corravet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and staring stains from a material and for reducing stains of bakery products. ```
The invention relates to a purified polypeptide with alpha-amylase
activity and the polynucleotide encoding it. The polypeptide is useful
for hydrolysing starch linkages, for catalysing the breakdown of a
starch, for modifying small molecules, for liquefying starch, for washing
con object, for textile dealzing, for treating lignocellulosic fibers, for
improving fibre properties, for enzymatic de-inking of recycled paper
con pulp, for producing a high-maltose or high-glucose syrup or a mixed
syrup, and for increasing the flow of production fluids from a
subterranean formation by removing a viscous, starch-containing, damaging
fluid formed during production operations and found within the
confluid formed during production operations and found within the
colypeptide is also useful for preparing a dough or a baked product
confluid processes, beverages, oil fields fluel ethanol), brewing processes
and starch modification in the paper and pulp industry, for removing
confluences Abbushand and for reducing staling of
confluences Abbushand and for reducing staling of
confluences bequences Abbushand and for reducing staling of
confluences Abbushand and for reducing staling of
                                                                                                                                                                                                                                                                          Alpha amylase; enzyme; starch linkage hydrolysis; starch liquefaction; starch breakdown catalysis; textile desizing; lignocellulosic fibre; enzymatic de-inking; recycled paper; high-maltose syrup; dough; high glucose syrup; corn-wet milling process; detergent; baking process; starch modification.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.
                                                                                                                                      Ą
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               셤
                   The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful activity and the polynucleotide encoding it. The polypeptide is useful for redisplaying small molecules, for alalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocallulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper publ, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for inoreasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product preparing a dough or a baked product companied from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and pulp industry, for removing starch containing stains from a material and for reducing staling of bakery products. Sequences ABU03040-ABU03144 represent alpha amylase

The invention relates to a purified polypeptide with alpha-amylase activity and the polymucleotide encoding it. The polypeptide is useful cativity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for cralysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing can object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic desinking of recycled paper cypulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a cypulp, formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subscraname formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product operation in the paper and pulp industry, for removing starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing stailing of bakery products. Sequences ABU03040-ABU03144 represent alpha amylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     240

polypeptides of the invention

```
The invention relates to a purified polypeptide with alpha-amylase activity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for caralysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing carach, for modifying small molecules, for liquefying starch, for washing the broberties, for enzymatic de-inking of recycled paper in pubp. for producing a high-malcose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, exacth-containing, damaging fluid formed during production operations and found within the cuberranean formation which surrounds a completed well bore. The propared from the dough and no cornwet milling processes, detergents, copyaged from the dough and no cornwet milling processes, detergents, copyaged from the dough and no cornwet milling processes, detergents, cand starch modification in the paper and pulp industry, for removing carach containing stains from a material and for reducing stailing of bakery products. Sequences ABU03040-ABU03144 represent alpha amylase
                                                                                                             420

The invention relates to a purified polypeptide with alpha-amylase activity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch. Inkages, for calalysing the breakdown of a starch, for modifying small meleciae, for liquefying starch, for washing carch, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper upto, for producing a high-maltose or high-queces syrup or a mixed syrup, and for increasing the flow of production fluids from a syrup, and for increasing the flow of production fluids from a complex from a subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subservance from the dough and in corn-wet milling processes, detergents, propared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of bakery products. The invention relates to a purified polypeptide with alpha-amylase activity and the polymucleotide encoding it. The polypeptide is useful corrivity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing consolidates, for treating lighocellulosic fibers, for improving fibre properties, for ensymatic de-inking of recycled paper to pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging consuberranean formation which aurounds a completed well bore. The subterranean formation which surrounds a completed well bore. The colypeptide is also useful for preparing a dough or a baked product containing processes, beverages, oil fields (fuel ethanol), brewing processes and staing processes, beverages, oil fields (fuel ethanol), brewing processes and stains from a material and for reducing stains of bakery products. Sequences ABU03040-ABU03144 represent alpha amylase
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     0

WPI; 2003-018656/01. N-PSDB; ABX08425.

Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.

Claim 30; Fig 16; 301pp; English.

The invention relates to a purified polypeptide with alpha-amylase activity and the polynucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for medifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulb, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging RESULT 12

ö
fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing stains of bakery products. Sequences ABU03040-ABU03144 represent alpha amylase polypeptides of the invention
                                                                                                                                                                                                                                                                                                                                120
                                                                                                                                                                                                                                                                                                                                                                                                 180

Alpha amylase polypeptide #9.

Alpha amylase; enzyme; starch linkage hydrolysis; starch liquefaction; starch breakdown catalysis; textile desizing; lignocellulosic fibre; enzymatic de-inking; recycled paper; high-maltose syrup; dough; high glucose syrup; corn-wet milling process; detergent; baking process; beverage; oil field; fuel ethanol; brewing process; staling; starch modification.

Unidentified

NO200268589-A2

21-FEB-2002; 2002WO-US005068.

```
The invention relates to a purified polypeptide with alpha-amylase activity and the polynuclectide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a starch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocallulosic fibers, for improving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-malcose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a wixed subterranean formation by removing a viscous, starch-containing, damaging fluid formed during production operations and found within the subterranean formation which surrounds a completed well bore. The polypeptide is also useful for preparing a dough or a baked product prepared from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch containing stains from a material and for reducing staling of bakery products. Sequences ABU031044 represent alpha amylase
                                                                                                                                                                                                                                                              Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        95.8%; Score 2356; DB 6; Length 436; 95.2%; Pred. crivity and the polymucleotide encoding it. The polypeptide is useful for hydrolysing starch linkages, for catalysing the breakdown of a trarch, for modifying small molecules, for liquefying starch, for washing an object, for textile desizing, for treating lignocellulosic fibers, for upoving fibre properties, for enzymatic de-inking of recycled paper pulp, for producing a high-maltose or high-glucose syrup or a mixed syrup, and for increasing the flow of production fluids from a subterranean formation by removing a viscous, starch-containing, damaging subterranean formation by removing a viscous, starch-containing, damaging polypeptide is also useful for preparing a dough or a baked product pelayed from the dough and in corn-wet milling processes, detergents, baking processes, beverages, oil fields (fuel ethanol), brewing processes and starch modification in the paper and pulp industry, for removing starch modification in the paper and for reducing staling of bakery products. Sequences ABU03040-ABU03144 represent alpha amylase polypeptides of the invention
                                                                                                                                                                                                                                                             Alpha amylase; enzyme; starch linkage hydrolysis; starch liquefaction; starch breakdown catalysis; texrile desizing; lignocellulosic fibre; enzymatic de-inking; recycled paper; high-maltose syrup; dough; high glucose syrup; corn-wet milling process; detergent; baking process; beverage; oil field; fuel ethanol; brewing process; staling;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Novel purified polypeptide with alpha-amylase activity, useful e.g. for liquefying starch, for textile desizing, for treating lignocellulosic fibers, and for producing high-maltose or high-glucose syrup.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a purified polypeptide with alpha-amylase
                                                                                               ABU03066 standard; protein; 436 AA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Claim 30; Fig 16; 301pp; English.
